

Every rapid drug test we sell, with its drug panels and cutoff levels. Cutoffs are in ng/mL; ALC on saliva tests is an alcohol pad read at about 0.02% BAC. "ADLTX" means built-in specimen validity checks (pH, specific gravity, creatinine). Rapid test results are preliminary: confirm non-negative results with a laboratory method (GC/MS or LC/MS/MS). These devices are not for DOT-regulated testing. Check each product page and package insert for intended use, and see the full cutoff chart at drugtestingcup.com/drug-test-cut-off-levels/.
